

INVENTOR CLAIM

What I claim as my invention is the mathematics and reading standardized test PLUS fully formatted concept. Once manufactured, I truly believe that it will change the way in which elementary education students view the test taking concept. While preparing them for the exams, it will also place them in the type of environment conducive with such factors as test anxiety, not to mention other stressors. Included in this invention is the PLUS! Factor. This provides a level of preparedness for children (during the summer) who are either being promoted, or an enhancer to better inform the children who will be held over of their expectations.

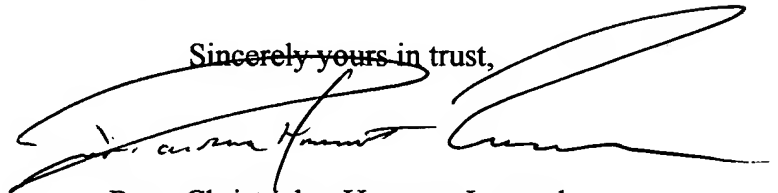

Too many of our youth simply are unprepared to take these exams. The parents blame the teachers and vice versa. As the saying goes, "The fault lies not in our stars, but in ourselves." I present a way of test preparation that will revolutionize the school systems nationwide. The children are our future; we must help them now so they can help us in the future.

There are so many ways that a concept of this proportion can be implemented; possibilities for other subjects are endless. From localities to state, national and even international. If given the opportunity of providing me with this patent, I promise to be as responsible as possible to the needs of our children regarding this beginning of things to come.

I am merely doing the Lord's work, for the Lord works through people; this is no mere coincidence that this application has fallen into your hands. His Father has written the Book Of Life; this is destiny. Please help me to help those who need help to help themselves so eventually they will be in a position to help others.

May God Bless you, your staff and your family.

Sincerely yours in trust,

A handwritten signature in black ink, appearing to read "Ryan Christopher Harcourt Leacock", written over a horizontal line.
